### DETAILED ACTION

1. Authorization for election requirement was given in a telephone interview with attorney Noll on August 26, 2005. Accordingly, the elected claims 1-3 are hereby considered on their merit in this Office action. The non-elected claims 4-7 are withdrawn.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Westphal et al (US 6,479,997).

As regards to claim 1, Westphal et al teach a gradient coil for a magnetic resonance tomography apparatus, including a spiral coil having an inner conductor feed section and an outer conductor feed section (figure 2, showing inner and outer feed sections), and disposed on a carrier plate (column 2, lines 8-16). Further, Westphal et al teach that the inner conductor feed section being disposed at a second level, separated from the first level, and the spiral coil with its inner and outer feed conductor sections are forming a continuous and unitary electrical conductor; and the inner conductor feed section is being disposed outside of the carrier plate ( figure 2, examiner reads the inner coil connection in this figure in 3D where the inner coils connected by a wire. Obviously,

therefore, the coil(s) are projected in different plane than a carrier plate carrying the spiral coil).

As regards to claims 2 and 3, Westphal et al further read the coil first level is a plane or a cylindrical surface (column 2, lines 8-16)

4. Other pertinent art, US 6,181,227 and US 5,409,558 also read on claims 1-3, separately or in combination.
